Veeam Backup for Microsoft Office 365

#1 Backup and Recovery for Microsoft Office 365

Your email is business critical!

Ensure total access, control and protection of all your Office 365 email data with TIMG

What would happen if you lost your email

Whether you have completely migrated to Microsoft Office 365, have a hybrid Exchange and Office 365 deployment, your business objectives remain the same. You must remain in control of your data, and you need Office 365 backup and recovery at your fingertips.

Veeam Backup for Microsoft Office 365 enables organisations to eliminate the risk of losing access to Office 365 email data and ensure availability for your users.

With Office 365, it's your data

Microsoft Office 365 enables your Always-On Enterprise to work anywhere, anytime, without the need to host your own email infrastructure. It also provides a great way to minimise your on-premises footprint and free up IT resources. But even though Microsoft hosts the infrastructure, this doesn't replace your responsibility to maintain a local backup of your Office 365 data.

With Veeam backup for Microsoft Office 365 you can:

- Take control of your organisations Office 365 data
- Reduce the time and effort needed to find and restore email data
- Protect against data loss scenarios that are not covered by Microsoft
- Facilitate the migration of email data between Office 365 and on-premises Exchange

Addressing Office 365 challenges head-on

1. Improve availability

Due to the scale of Microsoft Office 365, there is a limit to how long Microsoft keeps deleted emails [14 days by default]. With Veeam Backup for Office 365 you can keep your email data as long as needed, archive email data based on your retention or compliance needs.

2. Take control

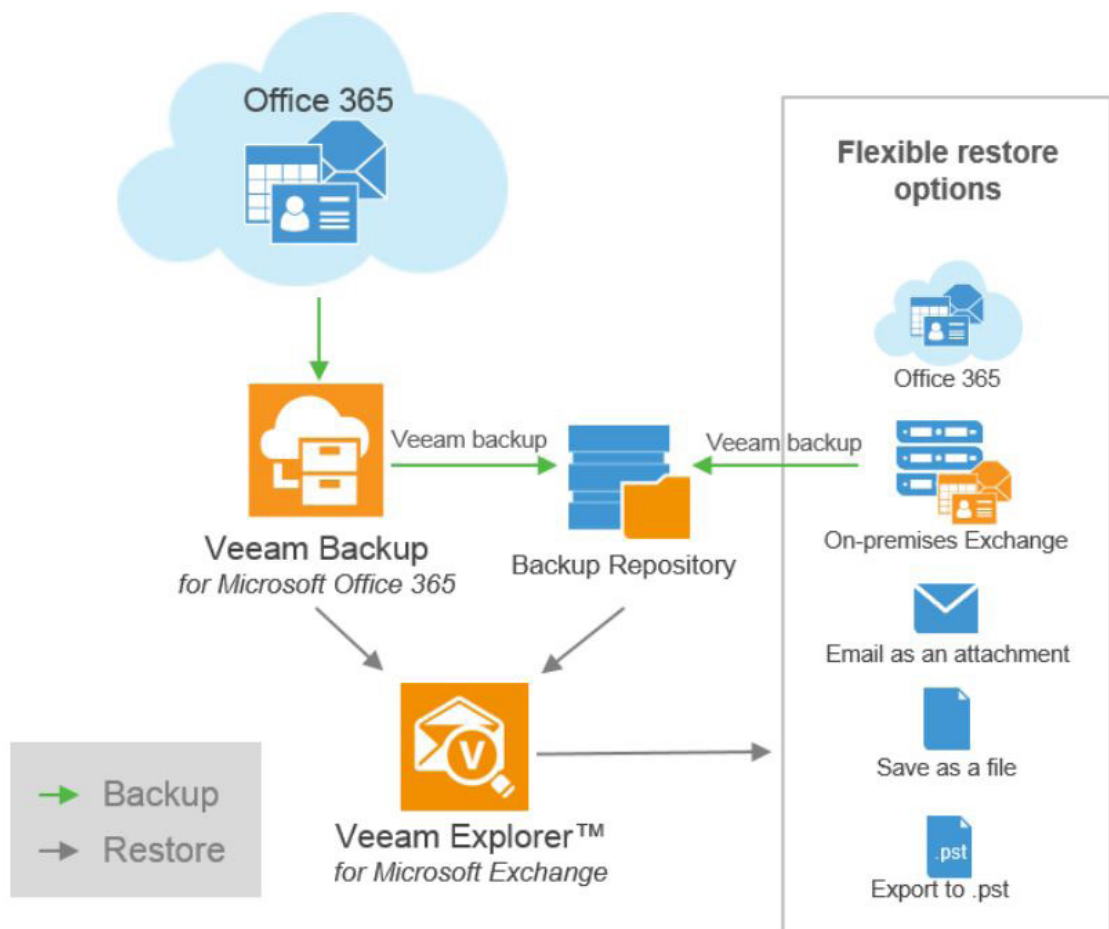

Veeam Backup for Microsoft 365 allows administrators to back up all mail items to their Veeam Backup & Replication repository for long term archival, search, restore and replication.

3. Reduce costs

Veeam Backup for Microsoft Office 365 allows archiving of old data out of a user's online mailbox and onto inexpensive on-premises storage. Businesses can save by not needing to purchase a more expensive Microsoft 365 Plan. Ex employees can have their mailboxes archived and the licence is transferable to the new employee.

With Office 365 it's your data – you control it –
and it is your responsibility to protect it!

What would happen if you lost your email

You need to securely backup Office 365 email data to another location for a variety of reasons [i.e. to follow the 3-2-1 Rule of backup, to facilitate eDiscovery and to meet internal policies and compliance requirements]. The most important reason being – to mitigate risk and have the peace of mind that you'll be able to restore your users data when needed.

With Veeam Backup for Office 365, you can retrieve all Office 365 Exchange Online mailbox items [email, calendar and contacts] from Office 365 and uniquely back up this mailbox data into the format that Microsoft Exchange uses natively – an archive database based on Extensible Storage Engine [ESE], also known as the Jet Blue database. You can also backup Exchange on-premises utilising the same APIs as Office 365, reducing the impact of running Exchange infrastructure and allowing more frequent backups of your user's email data.

Restore Office 365 email, calendars and contacts

Never settle for less than fast, efficient restore of Office 365 mailbox items with granular recovery.

The built in Veeam Explorer for Microsoft Exchange allows for quick search and recovery of individual mailbox items residing in either archived Office 365 or on-premises Exchange backups. Mailbox items can be restored directly to an Office 365 Mailbox, an on-premises Exchange mailbox, saved as a file, emailed as an attachment or exported as a PST.

eDiscovery of Office 365 email archives

Without a local copy of your data, retrieving emails for regulatory or compliance reasons can be costly and time consuming, and can ultimately present a major disruption to normal business operations.

Not with Veeam! You can leverage the familiar, advanced search capabilities and the flexible recovery and export options of Veeam Explorer for Microsoft Exchange to perform eDiscovery on Office 365 email archives – just as easily as you would with an on-premises Exchange server backup.

Important features

Increased scalability

A multi-repository, multi-tenant architecture enabling protection of larger Office 365 deployments with a single installation.

Powerful automation and self-service restore

Comprehensive automation with full Powershell and RESTful API support for all functionality as well as self-service restore, improved recovery times and reduced costs.

Meet compliance requirements

With an Office 365 backup, you can keep your email data as long as you need, and store data based on long term retention policies for regulatory or compliance needs.

With granular advanced search and find functionality, you can ensure that you recover exactly what you need, not more than you need.

Unified exchange and Office 365 backup

Veeam Backup for Microsoft Office 365 also allows you to protect hybrid-cloud email deployments as well as migrate mailbox data between Office 365 and on-premises Exchange.
